

HACKFLUENCE 2026 · IGDTUW

Karigar *Connect*

House Targaryen - DTU

Bridging rural craftsmanship and the creator economy through ML-driven influencer matching and structured micro-commerce.

CONTEXTUAL AI

CREATOR ECONOMY

DIRECT B2B

AI FOR CREATOR TOOLS

BRAND -CREATOR COLLABORATION

What is KarigarConnect AI?

A B2B Creator Economy platform for NGOs, government livelihood programs & handicraft cooperatives - acting as their automated digital marketing & affiliate agency.

7M+

Rural artisans in India
unreached by digital commerce

₹30K Cr

Annual handicraft export
potential left untapped

60–70%

Profit captured by middlemen
in traditional supply chains

Source: Using official govt data(backed by IBEF) and industry estimates

The Market Disconnect

Isolated Artisans

Rural cooperatives/ NGOs / Government initiatives craft premium, sustainable goods but operate completely isolated from high-conversion digital channels.

Middleman Exploitation

Traditional multi-tier brokers capture up to 70% of retail value, leaving grassroots creators severely underpaid.

Micro-Influencers

Lifestyle, design, and eco creators constantly seek original, ethical goods to recommend - but lack direct pathways to authentic makers.

Discovery Barrier

No streamlined digital mechanism exists. Influencers promote mass products, missing highly sellable craft goods.

Market Assessment: The core issue is neither demand nor quality. It is programmatic discovery, distribution and commercial mapping.

Systematic User Journey

Operational Advantage:

Bypasses typical agency logistics - reducing product campaign creation from weeks to under 60 seconds.

Campaign Setup: < 60
Second

Semantic Embeddings + KNN Retrieval

Context-Aware Creator Recommendation Engine

Products and creator profiles are converted into semantic embeddings using Sentence Transformers. K-Nearest Neighbors (KNN) retrieves the most relevant creators based on cosine distance in embedding space, enabling intelligent influencer discovery even with limited historical data.

PROXIMITY EXAMPLE

Product: "Sustainable wood-fired organic earthy clay pottery vase"

Creator: "Minimalist zero-waste home decor lifestyle blogger"

Similarity-Based Ranking

Semantic Embedding-Based Influencer Discovery

```
from sentence_transformers import SentenceTransformer
from sklearn.neighbors import NearestNeighbors
```

```
# Load embedding model
model = SentenceTransformer("all-MiniLM-L6-v2")
```

```
# Convert product description into embedding vector
product_vector = model.encode(product_metadata)
```

```
# Convert creator profiles into embedding vectors
creator_vectors = model.encode(all_creator_profiles)
```

```
# Find nearest creator matches using cosine distance
knn = NearestNeighbors(
    n_neighbors=20,
    metric="cosine"
)
```

```
# Build KNN search index
knn.fit(creator_vectors)
```

```
# Retrieve top matching creators
distances, indices = knn.kneighbors(
    [product_vector]
)
```

Feasible Architecture & Stack

SaaS Dashboard

Next.js + Tailwind CSS

Clean admin dashboards for NGO cooperatives, providing match metrics, campaign management & affiliate ledger analytics.

Intelligence Core

*Gemini 2.5 Flash
+Sentence Transformers
+KNN Retrieval Engine*

Analyzes products, generates embeddings, retrieves top creator matches using KNN, and predicts campaign outcomes.

Storage Ledger

CSV / JSON Dataset

Stores creator profiles, audience data, engagement metrics and embedding cache.

Forecasting Layer

Scikit-Learn

Predicts: Reach, Clicks, Orders, Revenue

Implementation Feasibility: 100% focused on core functional elements - no complex web-scraping dependencies, deployable in a standard cloud environment.

Business Model & Revenue Streams

B2B SaaS Subscription

Monthly/annual plans sold to NGOs, government livelihood programs & handicraft cooperatives. And for further Subscription plans for small D2C brands and handmade businesses seeking creator partnerships.

Affiliate Commission Split

Platform takes a % of every influencer-driven sale alongside the creator's own commission.

Dynamic Fair Profit Calculator: Core Business Differentiator

Displays true net payout before any batch production & eliminating hidden cost surprises for cooperatives:

Retail Price

₹800.00

Logistics & Courier

- ₹120.00

Creator Affiliate (10%)

- ₹80.00

Platform Handling (1.87%)

- ₹15.00

Net Payout

₹585.00

The Road Ahead

Phase 2

Multilingual AI Support

WhatsApp-based onboarding & chatbot in Hindi, Tamil, Bengali for artisans with no English literacy.

Phase 2

Logistics Integration

API tie-ins with Shiprocket & Delhivery for end-to-end order fulfilment and real-time tracking.

Phase 3

Embedded Micro-Finance

AI credit scoring on campaign performance for artisan working capital loans via partner NBFCs.

Phase 3

Blockchain Traceability

On-chain product provenance to verify handmade authenticity & premium ESG market positioning.

Phase 4

Cross-Border Export Engine

ONDC & GeM portal integration plus AI-powered export documentation for global marketplaces.

Phase 4

Deep Learning Upgrade

Fine-tuned recommendation models using campaign outcomes and creator performance history.

EXPECTED IMPACT

Democratizing the Creator Economy

Eliminates exploitative middlemen - routing higher margins directly to rural artisan cooperatives

Expands digital reach for traditional artisan products through creator-led commerce.

Empowers NGOs with enterprise-grade creator marketing tools at an accessible B2B SaaS price

Bridges India's & World's digital divide between rural producers and India's booming creator economy
